32 analog channels + 32 logic channels

The Memory HiCorder MR8827 achieves isolated input between the main unit and channel or between channels, at a maximum sampling speed of 20 MS/s on all channels.

It provides mixed recording that combines 32 analog channels and 32 logic channels, and logic input can be expanded up to 64 channels.

Welcome to the next generation of Hioki Memory HiCorders that deliver multi-channel waveform recording of a diverse array of signals to meet complex and demanding applications.

CE **3** year Warranty

*When using 64 logic channels, 28 analog channels are available.

# MR8827 - Evolving to the Next Stage of High-Speed Waveform Recording

The high-performance 8826 delivered the most analog channels out of all portable-type Memory HiCorders. The new MEMORY HiCORDER MR8827 inherits that concept and evolves even further.

20x Sampling Speed
A/D converter integrated in the input amp

1MS/s ▶ 20MS/s

The sampling speed (for all channels simultaneously) increased by 20 times, while maintaining isolated input.

2x Logic Input Channels

Logic Unit 8973

32ch ▶ 64ch

A maximum of 8 logic probes can be inserted in the main unit. Use of 2 Logic Unit 8973 will add 8 more connections, supporting 64 channel logic signal input. (This reduces the number of available analog channels to 28.)

8x Internal Memory Capacity

64MW ▶ 512MW

With 8 times more internal memory capacity from 64 MW to 512 MW, you can now record signals of fast events easily and for extended periods of time.

Storage Devices and Media

USB Memory/CF Card
SSD (Solid State Drive)

Use various storage devices and media with more capacity and faster writing speeds than conventional drives or PC cards. The optional internal SSD has 128 GB of capacity so you can store large amounts of data.

3x PC Transfer Speed

3 times faster transfer speed!

Conventional transfer time

Data transfer time →
Transferring speed of stored data from internal memory or SSD to the PC has greatly increased.

LCD Resolution
10.4 inch TFT   10.4 inch SVGA
640×480 ▶ 800×600

Overlapping waveforms are easier to identify now with a new high resolution LCD.

## 2x Paper Feeding Speed

25mm/sec ▶ 50mm/sec

Use of a high-speed thermal printer gives you 2 times the printing speed.

Easy Setup of Recording Paper

No more hassles of feeding recording paper between the rubber roller and the thermal head. Just drop it in to set it up.

A4 Size Printer

Print in fine detail, with 2 times the paper feeding speed. Get a printout of enlarged waveforms on A4 size paper so you can check them easily on-site.

Scalable Input Channels

A maximum of 16 modules can be connected on the rear side. The main unit also has connectors for connecting 8 logic probes.
Isolated Input for Security

Isolation element

The MR8827 differentiates itself from typical oscilloscopes by providing complete isolation for the input of each channel, and between each channel and the main frame, enabling you to handle electrical potential differences among multiple signals without any concern.

Abundant modules

Hioki has added new high-performance modules in response to overwhelming demand.
The Memory HiCorder now supports a wide variety of measurements.
# Output and record results seamlessly

Just one MEMORY HiCORDER gives you a function generator mode, arbitrary waveform generator mode, and waveform measurement mode.
This makes it easy to observe waveforms while varying test conditions, such as changing the signal's amplitude and frequency and programming various waveforms to output in order.

Precautions for connecting current sensors and current probes

* The bandwidth of current sensors and current probes is limited by the bandwidth of the current unit to be connected.

* Depending on the combination of current sensors and current probes, physical and space limitations may prevent simultaneous connection. Hioki can assist with special order conversion cables. Please inquire with your local distributor.

* A total of 8 current sensors and current probes can be connected simultaneously to the Memory HiCorder. However, it is limited by the capacity of the current sensor to be connected.

* Four 8971 current units can be simultaneously connected to the Memory HiCorder.

* If combining a current sensor or current probe with a sensor power source and using the voltage input analog unit for current measurement, there is no limitation on the number of connections.
