

Covid-19 has caused many challenges, including gaining access to labs.

Probe from Home, When Access to the Lab is not Possible

Autonomous RF Measurement Assistant

- / Control, calibrate and measure all your devices...
- / ...on all your wafers...
- / ..at all temperatures...
- / ...from home or anywhere in the world.

Calibration Monitor and Re-Calibration

- / System continuously monitors calibration drift
- / Automatically re-calibrates the system should the drift exceed a pre-defined limit

Unattended Use

- / Measurements can be left running over night
- / Tests all devices on the wafer, and at different temperatures without the need of the operator

Increased Throughput and Productivity

- / True 24/7 testing, even over temperature
- / System will re-align the probes to the pads if they drift away from alignment
